### AS 9100 C to AS 9100 D - QMS Upgrade Instructions / Checklist

This instruction / checklist is intended for use in upgrading your Quality Management System for the upgrade from the AS 9100 C version to the AS 9100 D revision for Quality management systems used in the aviation, space, and defense industries.

The above Quality Management Systems are compatible with each other and have common requirements.

In the SAE Aerospace Standard AS 9100D, the requirements are described						
in:			Previously in <b>AS 9100C</b> , the requirements were described in:			
•	Clause 4	Context of the organization	٠	Clause 4	Quality management system	
•	Clause 5	Leadership	•	Clause 5	Management responsibility	
•	Clause 6	Planning	•	Clause 6	Resource management	
•	Clause 7	Support	•	Clause 7	Product realization	
•	Clause 8	use 8 Operation		Clause 8	Measurement, analysis and improvement	
•	Clause 9	Performance evaluation	•	012030 0	inclustrement, analysis and improvement	
•	Clause 10	Improvement				

You have the 2009 Rev C version in place and now have the objective of upgrading the system to the 2016 Rev D revision. The good news is that since you are familiar with formal management systems, this initiative will be relatively straightforward.

Essentially, the documentation package for the management system will contain:

- One condensed Manual to introduce the documented information required for AS 9100 D.
- A group of procedure/system documents in your QMS with updates to reflect a document numbering system related to the new clause numbers and to incorporate the upgrades for AS 9100 D requirements,
- A group of forms and attachments needed for the documented information and systems.

The documentation will need to be reviewed, upgraded and implemented. The first step is to assign a person responsible for the QMS, such as with a Management Representative to become familiar with the changes for the 2016 version of the AS 9100 D standard. Visit <u>AS9100store.com</u> for training materials, resources and information on quality management systems requirements.

The following table with detailed instructions focuses on the areas of the documentation required for the AS 9100 D quality management system. As you undertake the task of upgrading your quality management system from the 2009 version to the 2016 version, note that the intent of the main clauses is shown in blue font, and in the 2nd left hand column of the instructions, the text in *italics* indicates where requirements were included in previous AS 9100 C.

Use a copy of the AS 9100 D standard along with this instruction to pinpoint for your organization the areas that need attention. You may want to make notes and add comments in the space available to the right and the left of the column for reference documentation. Use the upgrade checklist section on the right side of the table to assign the responsibility for the upgrade and to follow up on its completion.

# AS 9100 C to AS 9100 D - QMS Upgrade Instructions / Checklist

AS 9100	Changes to the existing AS 9100 Rev C	Reference	Changes in existing documentation	Upgrade Checklist	
Rev D Clause	Quality System	document		Assigned to:	Date Completed
All	The SAE international Aerospace standard AS 9100 Rev D is restructured and contains 10 sections or clauses numbered 1 through 10. The standard is revised to incorporate the new clause structure and content of ISO 9001:2015. In addition, aviation, space, and defense(ASD) industry requirements, definitions, and notes are included.	AS 9100 D	The requirement clauses of the new standard are the Clause 4 through Clause 10. Your company needs to become familiar with the new structure and the changes and subsequently upgrade the Quality Management System (QMS).		
All	While the specific requirement for a quality manual is not in AS 9100 D, the standard requires that Documented Information be maintained for the QMS.	Manual	Replace / rework your existing Quality Manual with a condensed version that will introduce the quality system. A quality manual is not included as a requirement in clause 7.5.1 of AS 9100 D; however, the note in 4.4.2 suggests that a quality manual can be used to compile into a single source the documented information for the QMS.		
	In AS 9100 C, the requirement for a Quality Manual was in clause 4.2.2.	Manual	<ul> <li>In the condensed manual include sections for:</li> <li>Scope of the Quality Management System (QMS)</li> <li>Distribution Control List,</li> <li>Revision Status,</li> <li>Quality Policy and Objective, Strategic Direction,</li> <li>Organization Chart,</li> <li>Company Background - Products and Services,</li> <li>Process Flow Diagram,</li> <li>List of Documented Information,</li> <li>Records Documentation Matrix.</li> </ul>		
	The specific requirement for documented procedures is not in AS 9100 D; however documented information is required to plan, establish, implement, and maintain the QMS processes.	Documented information	The QMS documented information may be presented in any suitable format such as in a method, an instruction, a system, a process, a procedure, a manual, etc. You will need to add / replace / rework your QMS procedures to incorporate the AS 9100 D requirements. An early consideration is the development of a process for the control of documented information. Replace / rework the documented procedures for

### AS 9100 Rev D Quality Management Systems - The Internal Audit Checklist

This checklist is based on the information provided in the 2016 revision of the AS 9100 Rev D, SAE international aerospace standard. The checklist is best used by trained and practicing auditors to evaluate or assess Quality Management Systems requirements based on the standard. You will see guestions on the checklist that refer to the standard and, for each clause, provisions are made for additional questions.

The auditors are expected to keep in mind that the standard does not require mandatory procedures for the various QMS processes; however, the auditors will expect documented information to be available because in the clauses of the standard, the phrase 'documented procedures' is used to specify that a process, a method, a system, a work instruction, or an arrangement be documented.

The auditors must use a great deal of discretion and therefore must be careful and thoughtful prior to establishing a deficiency against a requirement. Evidence for visible top management leadership, commitment and quality management action must be looked for.

The **bold** numbers and tittles used in the first two columns of the checklist indicate the "Requirements" and may be referred to on nonconformity reports prepared by the auditor.

During assessment of each requirement, auditors record the status of the evaluation by indicating in the right-hand column a

Yes - for Acceptable Condition or No - for Deficient Condition

	QUALITY MANAGEMENT SYSTEM	OBSERVATIONS / COMMENTS	STATUS			
4	CONTEXT OF THE ORGANIZATION					
4.1	Understanding the organization and its context					
	Does your company determine the external and internal issues that are relevant to your purpose and strategic direction?					
	Do you consider the relevant issues that affect your ability to achieve the intended results of the Quality Management System (QMS)?					

Audit conducted by:

## AS 9100 Rev D Quality Management Systems - The Internal Audit Checklist

	Does the management representative have the organizational freedom and unrestricted access to top management to resolve quality management issues? NOTE: The responsibility of a management representative can include liaison with external parties on matters relating to the quality management system.				
	Additional Questions				
6	PLANNING				
6.1	Actions to address risks and opportunities				
6.1.1	When planning for the QMS, does your company consider the issues referred to in 4.1 and the requirements referred to in 4.2 and determine the risks and opportunities that need to be addressed?				
	Is this performed to:				
	Give assurance that the QMS can achieve its intended results?				
	Enhance desirable effects?				
	Prevent, or reduce undesired effects?				
	Achieve improvement?				

# **INSERT YOUR COMPANY NAME/LOGO HERE**

#### 1.0 Purpose/Scope

1.1 The purpose of this procedure is to provide a method to assist assigned individuals in performing consistent, complete, satisfactory root cause analysis.

### 2.0 Responsibilities and Authorities

- 2.1 The Management Representative is responsible for determining whether or not a Root Cause Analysis is appropriate for the situation.
- 2.2 The Management Representative is responsible for ensuring that all completed Root Cause Analysis documentation is filed and stored appropriately.
- 2.3 The Management Representative is responsible for the overall coordination of the Root Cause Analysis process including closure after satisfactory results have been obtained.
- 2.4 The Management Representative is responsible for the coordination of root cause analysis training with procedure P-720 for Competence and awareness.

### 3.0 References and Definitions

### 3.1 References

3.1.1 This document relates to clause 9.1.3, Analysis and evaluation and clause 10.2, Nonconformity and corrective action, of AS 9100 D standard.

#### 3.2 Definitions

- 3.2.1 Cause: An event or condition that results in an effect. Anything that shapes or influences the outcome.
- 3.2.2 Event: A real-time occurrence describing one action, typically an error, failure, or malfunction or unwanted condition.
- 3.2.3 Condition: Any found state, whether or not resulting from an event, that may have safety, health, quality, security, operational, or environmental implications.
- 3.2.4 Barrier: A physical device or an administrative control used to reduce risk of the undesired outcome to an acceptable level. Barriers can provide physical intervention or procedural separation in time and space.
- 3.2.5 Contributing Factor: An event or condition that may have contributed to the occurrence of an undesired outcome but, if eliminated or modified, would not by itself have prevented the occurrence.
- 3.2.6 Organizational Factors: Any operational or management structural entity that exerts control over the system at any stage in its life cycle, including but not limited to the system's concept, development, design, fabrication, test, maintenance, operation, and disposal.
- 3.2.7 Root Cause Analysis (RCA) a structured evaluation method that identifies the root causes for an undesired outcome and the actions adequate to prevent recurrence. Root cause analysis should continue until organizational factors have been identified, or until data has been exhausted.
- 3.2.8 Root Cause(s): One or more factors that contributed to or created the proximate cause and subsequent undesired outcome and, if eliminated,
